Resin-Molded Chip, Standard Tantalum J-Lead

FEATURES

- · Compliant to the RoHS3 directive 2015/863/EU
- · SMD J-Lead
- · 100% Surge Current Tested

LEAD-FREE LEAD-FREE COMPATIBLE COMPONENT

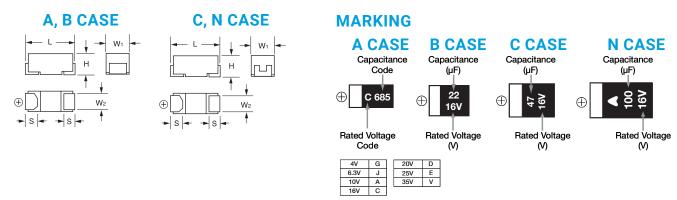

APPLICATIONS

· Low Power DC/DC

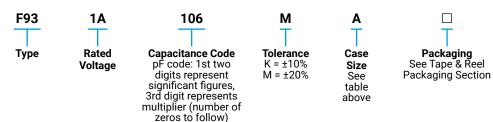

CASE DIMENSIONS:

millimeters (inches)

HOW TO ORDER

TECHNICAL SPECIFICATIONS

Category Temperature Range:	-55 to +125°C
Rated Temperature:	+85°C
Capacitance Tolerance:	±20%, ±10% at 120Hz
Dissipation Factor:	Refer to next page
ESR 100kHz:	Refer to next page
Leakage Current:	After 1 minute's application of rated voltage, leakage current at 20°C
	is not more than 0.01CV or 0.5µA, whichever is greater.
	After 1 minute's application of rated voltage, leakage current at 85°C
	is not more than 0.1CV or 5µA, whichever is greater.
	After 1 minute's application of derated voltage, leakage current at
	125°C is not more than 0.125CV or 6.3μA, whichever is greater.
Capacitance Change By Temperature	+15% Max. at +125°C
	+10% Max. at +85°C
	-10% Max. at -55°C

Resistance soldering heat	±5
Surge	±5
Endurance	±10

QUALIFICATION TABLE

TEOT	F93 series (Temperature range -55°C to +125°C)								
TEST	Condition								
Damp Heat (Steady State)	At 40°C, 90 to 95% R.H., 500 hours (No voltage applied) Capacitance Change								
Temperature Cycles	-55°C / +125°C, 30 minutes each, 5 cycles Capacitance Change								
Resistance to Soldering Heat	10 seconds reflow at 260°C, 5 seconds immersion at 260°C. Capacitance Change								
Surge	After application of surge voltage in series with a 33Ω resistor at the rate of 30 seconds ON, 30 seconds OFF, for 1000 successive test cycles at 85°C, capacitors shall meet the characteristic requirements in the table above. Capacitance Change Refer to page 33 (*1) Dissipation Factor								
Endurance	After 2000 hours' application of rated voltage in series with a 3Ω resistor at 85° C, or derated voltage in series with a 3Ω resistor at 125° C, capacitors shall meet the characteristic requirements in the table above. Capacitance Change								
Shear Test	After applying the pressure load of 5N for 10±1 seconds horizontally to the center of capacitor side body which has no— electrode and has been soldered beforehand on a substrate, there shall be found neither exfoliation nor its sign at the ^{5N (0.51kg·f)} terminal electrode.								
Terminal Strength	Keeping a capacitor surface-mounted on a substrate upside down and supporting the substrate at both of the opposite bottom points 45mm apart from the center of capacitor, the pressure strength is applied with a specified jig at the center of substrate so that the substrate may bend by 1mm as illustrated. Then, there shall be found no remarkable abnormality on the capacitor terminals.								
Failure Rate	1% per 1000 hours at 85°C, V _R with 0.1Ω/V series impedance, 60% confidence level.								

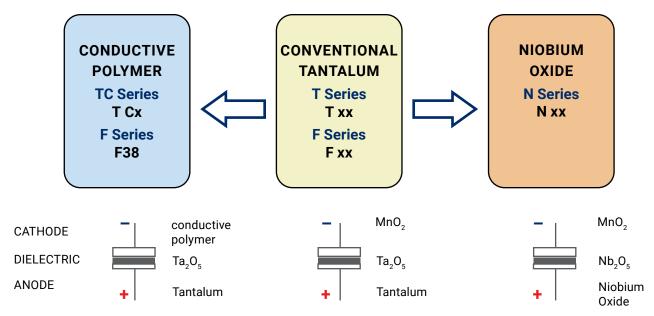

We can supply the type of compliance to AEC-Q200. Please contact to your local AVX sales office when these series are being designed in your application.

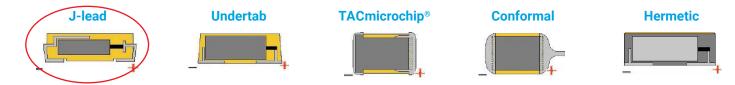

^{#: &}quot;M" for $\pm 20\%$ tolerance, "K" for $\pm 10\%$ tolerance. Moisture Sensitivity Level (MSL) is defined according to J-STD-020.
